

## **Evaluate possible methods of government intervention to control household energy bills in the UK**

Supply-side intervention is one possible method to control household energy bills. Firms receiving financial grants through “lump sum payments or tax breaks” would be able to offset costs (such as..). In turn, firms may pass savings onto consumers, via price reduction, so as to gain market share. In turn, energy prices decrease. The average UK household energy bill (gas and electric combined) rose 80% from £1971 in 2021 to £3549 in 2022
